The following is a complete listing of all claims in the application, with an indication of the status of each:

Listing of claims:

- 1 1. (currently amended) A method of purchasing products and services over a
2 network comprising the steps of:
3 submitting a Request for Quotation (RFQ) with a plurality of attributes
4 over the network;
5 receiving a plurality of bids in response to the RFQ over the network,
6 each of the plurality of bids having values for each of said plurality of
7 attributes;
8 creating a graphical visual interface based on a coordinate system
9 having a plurality of equidistant, parallel axes with ~~each a separate one of the~~
10 plurality of attributes identified ~~along with each~~ respective one of the plurality
11 of equidistant, parallel axes, and for each of said plurality of attributes there is
12 a point along said respective parallel axis which reflects ~~an a corresponding~~
13 attribute value for ~~an a respective~~ attribute of each corresponding one of said
14 plurality of bids, and where each of said plurality of bids is identified by a bid
15 line which connects said plurality of corresponding attribute values for each
16 corresponding bid a plurality of points wherein each point is associated with
17 an attribute value for one attribute of a bid of said plurality of bids, whereby
18 the graphical user interface shows a relationship in a graphical format
19 between attribute values of different attributes of different bids of said
20 plurality of bids in a single display, each of said plurality of bids being
21 responsive to said RFQ; and
22 displaying information pertinent to a selected bid of the plurality of
23 bids.

1 2. (canceled)

1 3. (previously presented) The method of claim 1, wherein the information is
2 one of a general information and detailed information related to at least one
3 bid of said plurality of bids.

1 4. (previously presented) The method of claim 3, further comprising the
2 steps of:
3 selecting a portion of a bid line; and
4 retrieving the general or detailed information from a database, the
5 general or detailed information being pertinent to the bid line.

1 5. (previously presented) The method of claim 4, wherein the retrieved
2 general information is provided in a window adjacent the bid line.

1 6. (original) The method of claim 4, further comprising the steps of:
2 creating a display separate from the graphical visual interface; and
3 displaying the detailed information in the separate display.

1 7. (original) The method of claim 6, wherein the detailed information is
2 rendered in one of text, image, audio, sound, video, graphs and animation.

1 8. (previously presented) The method of claim 1, wherein the information is
2 attribute information associated with one bid line.

1 9. (previously presented) The method of claim 8, further comprising the
2 steps of:

3 selecting a portion of a bid line; and

4 retrieving the attribute information from a database for display.

1 10. (original) The method of claim 9, wherein the attribute information is
2 one of text, image, audio, sound, video, graphs and animation.

1 11. (previously presented) The method of claim 1, further comprising the
2 steps of:

3 tagging at least one bid line; and

4 displaying the tagged at least one bid line on the graphical visual
5 interface after a selected filtering operation.

1 12. (currently amended) The method of claim 11, wherein ~~the graphical~~
2 information displayed on the graphical visual interface includes ~~is~~ at least one
3 attribute value associated with the tagged at least one bid line.

1 13. (previously presented) The method of claim 11, further comprising the
2 steps of:

3 untagging the at least one bid line; and

4 removing the untagged at least one bid line from the graphical visual
5 interface in response to the selected filtering operation.

1 14. (original) The method of claim 1, further comprising the step of
2 displaying a count of bid lines associated with the at least one bid, the count
3 being displayed on the graphical visual interface.

- 1 15. (original) The method of claim 14, further comprising the steps of
2 continuously counting the number of bid lines and displaying the counted
3 number of bid lines in the graphical visual interface.
- 1 16. (original) The method of claim 1, further comprising the steps of
2 enlarging or reducing a portion of the graphical visual interface.
- 1 17. (previously presented) The method of claim 16, wherein the enlarging or
2 reducing steps show portions of bid lines.
- 1 18. (original) The method of claim 1, further comprising the step of scrolling
2 the graphical visual interface in a desired direction.
- 1 19. (currently amended) A method of purchasing products and services over
2 a network comprising the steps of:
3 submitting a Request for Quotation (RFQ) with a plurality of attributes
4 over the network;
5 receiving a plurality of bids in response to the RFQ over the network,
6 each of the plurality of bids having values for each of said plurality of
7 attributes;
8 creating a graphical visual interface based on a coordinate system
9 having a plurality of equidistant, parallel axes with ~~each a separate one~~ of the
10 plurality of attributes identified ~~along with each~~ respective one of the plurality
11 of equidistant, parallel axes, and for each of said plurality of attributes there is
12 a point along said respective parallel axis which reflects ~~an a corresponding~~
13 attribute value for ~~an a respective~~ attribute of each corresponding one of said
14 plurality of bids, and where each of said plurality of bids is identified by a bid
15 line which connects said plurality of corresponding attribute values for each

16 ~~corresponding bid~~ a plurality of points wherein each point is associated with
17 an attribute value for one attribute of a bid of said plurality of bids, whereby
18 the graphical user interface shows a relationship in a graphical format
19 between attribute values of different attributes of different bids of said
20 plurality of bids in a single display, each of said plurality of bids being
21 responsive to said RFQ; and
22 tagging at least one bid line of the bid lines, wherein the tagged at least
23 one bid line remains displayed on the graphical visual interface after a
24 selected filtering operation.

1 20. (previously presented) The method of claim 19, further comprising the
2 steps of:

3 untagging the at least one bid line; and
4 removing the untagged at least one bid line from the graphical visual
5 interface in response to the selected filtering operation.

1 21. (previously presented) The method of claim 19, further comprising the
2 step of providing information pertinent to the tagged at least one bid line.

1 22. (currently amended) A system for purchasing products and services over
2 a network comprising:

3 means for submitting a Request for Quotation (RFQ) with a plurality
4 of attributes over the network;

5 means for receiving a plurality of bids in response to the RFQ over the
6 network, each of the plurality of bids having values for each of said plurality
7 of attributes;

8 means for creating a graphical visual interface based on a coordinate
9 system having a plurality of equidistant, parallel axes with ~~each~~ a separate one

10 of the plurality of attributes identified along with each respective one of the
11 plurality of equidistant, parallel axes, and for each of said plurality of
12 attributes there is a point along said respective parallel axis which reflects ~~an~~ a
13 corresponding attribute value for ~~an~~ a respective attribute of each
14 corresponding one of said plurality of bids, and where each of said plurality of
15 bids is identified by a bid line which connects said plurality of corresponding
16 attribute values for each corresponding bid a plurality of points wherein each
17 point is associated with an attribute value for one attribute of a bid of said
18 plurality of bids, whereby the graphical user interface shows a relationship in
19 a graphical format between attribute values of different attributes of different
20 bids of said plurality of bids in a single display, each of said plurality of bids
21 being responsive to said RFO; and
22 means for providing information associated with a selected bid of the
23 plurality of bids.

1 23. (original) The system of claim 22, wherein the information is one of
2 general information, detailed information and attribute information.

1 24. (previously presented) The system of claim 23, further comprising:
2 means for selecting a portion of a selected bid line; and
3 means for retrieving the general or detailed information from a
4 database, the general or detailed information being pertinent to the selected
5 bid line.

1 25. (original) The system of claim 24, further comprising:
2 means for creating a display separate from the graphical visual
3 interface; and
4 means for displaying the detailed information in the display.

1 26. (previously presented) The system of claim 22, further comprising means
2 for tagging at least one bid line, the tagged at least one bid line being
3 displayed on the graphical visual interface after a selected filtering operation.

1 27. (original) The system of claim 22, further comprising:
2 means for counting bid lines created from connected attribute values
3 of the at least one bid; and
4 means for displaying the counted bid lines.

1 28. (original) The system of claim 22, further comprising means for
2 enlarging or reducing a portion of the graphical visual interface.

1 29. (original) The system of claim 22, further comprising means for scrolling
2 the graphical visual interface in a desired direction.

1 30. (currently amended) A computer machine-readable medium having
2 instructions containing code for purchasing products and services over a
3 network, said instructions when executed by a computer cause said computer
4 to perform the code implementing the steps of:
5 submitting a Request for Quotation (RFQ) with a plurality of attributes
6 over the network;
7 receiving a plurality of bids in response to the RFQ over the network,
8 each of the plurality of bids having values for each of said plurality of
9 attributes;
10 creating a graphical visual interface based on a coordinate system
11 having a plurality of equidistant, parallel axes with ~~each a separate one~~ of the
12 plurality of attributes identified ~~along with each~~ respective one of the plurality

13 of equidistant, parallel axes, and for each of said plurality of attributes there is
14 a point along said respective parallel axis which reflects ~~an~~ a corresponding
15 attribute value for ~~an~~ a respective attribute of each corresponding one of said
16 plurality of bids, and where each of said plurality of bids is identified by a bid
17 line which connects said plurality of corresponding attribute values for each
18 corresponding bid ~~a plurality of points wherein each point is associated with~~
19 ~~an attribute value for one attribute of a bid of said plurality of bids~~, whereby
20 the graphical user interface shows a relationship in a graphical format
21 between attribute values of different attributes of different bids of said
22 plurality of bids in a single display, each of said plurality of bids being
23 responsive to said RFQ; and
24 providing information associated with a selected bid of the plurality of
25 bids.
